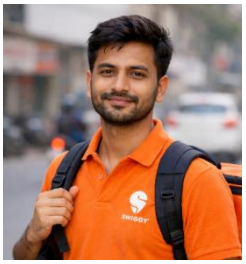
User Persona – Gig Economy Delivery Partner



Basic Information

Name: Rahul Kumar
Age: 26
Occupation: Swiggy Delivery Partner
Location: Hyderabad, India
Experience: 2 years as a delivery partner

Background

Rahul Kumar works as a full-time delivery partner for Swiggy in Hyderabad. Like many gig economy workers, his income is directly dependent on the number of deliveries he completes each day. Unlike traditional employees, Rahul does not receive a fixed salary or employment benefits. Instead, his earnings fluctuate based on order availability, working hours, and external conditions.

Rahul typically works around **8–10 hours per day** navigating busy city roads to complete food deliveries. His smartphone acts as his primary work tool, allowing him to receive orders, track navigation, and monitor his daily earnings. His weekly income generally ranges between **₹3500 and ₹4500**, which he uses to manage fuel expenses, rent, and daily living costs.

Work Pattern

- Works approximately **8–10 hours per day**
- Completes **20–25 deliveries daily** under normal conditions
- Travels **60–80 kilometers per day** across the city
- Relies on weekly earnings to cover essential expenses

Key Challenges

Rahul frequently faces external disruptions that directly impact his ability to work. Environmental conditions such as **heavy rainfall, extreme heat, severe air pollution, and sudden road restrictions** can significantly reduce delivery demand or make certain delivery zones inaccessible.

Since gig workers do not have income protection mechanisms, these disruptions often lead to **20–30% loss in Rahul's weekly earnings**. Such uncertainty makes it difficult for delivery partners to maintain financial stability and plan their expenses.

Goals & Needs

Rahul wants a reliable solution that helps him maintain stable earnings despite external disruptions. He needs a simple and transparent system that can detect events like extreme weather conditions and automatically provide financial support when his working hours are affected. A fast and easy process that does not require complicated claim procedures is essential for workers like Rahul who spend most of their time on the road.

How GigShield Helps

GigShield safeguards gig workers from sudden income loss by monitoring real-time disruptions like weather, pollution, and city alerts.AI-driven analysis sets affordable weekly premiums tailored to delivery partners. When thresholds are crossed, payouts are triggered instantly — no claims or paperwork. This ensures timely financial support and stability during unpredictable conditions.

Vision

GigShield is more than insurance — it's a financial safety net for India's gig workforce, enabling millions like Rahul to thrive in an uncertain economy. Its mission is to transform gig work from uncertain survival into a secure, dignified livelihood.
